Introduction: Why This Guide Exists

My name is Rebecca, and I have spent the last decade building marketing systems that move real numbers. I have built the engines behind more than 10 million subscribers, helped raise over \$15 million annually, and generated billions of video views across platforms. I doubled a digital fundraising program from \$7 million to \$14 million in annual revenue and built a base of 250,000 active recurring supporters from the ground up.

Now, through Seedscale Agency, I build those same systems for founders and lean teams who want to grow without hiring an army.

I share this not to impress you, but to make one thing clear: the strategies in this guide are not theory. They are the same principles I have used at every scale, from startups to organizations processing millions of dollars.

AI Changed the Math

Here is what shifted everything. The systems that used to require teams of ten, months of planning, and six-figure budgets can now be built with AI tools and a laptop. I have watched this happen in real time. Tasks that took a full marketing team a quarter to execute can now be accomplished by one person in a weekend.

AI tools did not just make things faster. They compressed the timeline from months to days. They made it possible for someone with no technical background, no marketing degree, and no existing audience to build a real digital business.

The Question I Keep Hearing

Every week, someone asks me the same thing: *"I know AI is changing everything, but where do I actually start?"*

This guide is that answer.

If you have expertise, a skill, or a passion that you want to turn into a digital product or business, this guide will show you exactly how to do it using AI tools that exist right now. You do not need to know how to code. You do not need a marketing degree. You do not need an existing audience. You need this guide, a laptop, and the willingness to start.

WHAT YOU WILL WALK AWAY WITH

- A clear understanding of which AI tools to use and when
- A system for creating content that attracts buyers, not just viewers
- A strategy for turning followers into email subscribers and customers
- A 30-day action plan with daily tasks, time estimates, and specific AI prompts
- Copy-paste prompts you can use immediately in your business

Let us get started.

PART 1

The AI Tools That Matter Right Now

Claude — Your AI Thinking Partner

What It Is

Claude is an AI assistant built by Anthropic. Think of it as an extremely knowledgeable colleague who never sleeps, never gets tired, and can write, analyze, and brainstorm at a level that used to require hiring a full team. Unlike search engines that give you links, Claude gives you direct, thoughtful answers and can produce complete drafts, analyses, and strategies in seconds.

What Claude Does Best

- **Long-form writing** — sales pages, email sequences, course content, blog posts. Claude produces writing that sounds human, not robotic.
- **Analysis and research** — competitor breakdowns, market research, data interpretation. Paste in a competitor's landing page and get a full strategic analysis in 30 seconds.
- **Brainstorming and strategy** — product ideas, content calendars, positioning frameworks. Claude does not just generate ideas; it thinks through trade-offs and helps you prioritize.
- **Editing and refinement** — take rough drafts and polish them. Adjust tone, tighten copy, restructure arguments.

Free vs. Pro (\$20/month)

The free tier gives you access to Claude with usage limits. For casual use, exploring the tool, or testing it out, the free version works fine. But if you are building a business, the Pro plan at \$20 per month is essential. You get significantly more messages, access to the most capable models, and the ability to handle longer documents and more complex tasks. For context, \$20 per month replaces what would cost you \$500 or more per month if you hired a freelance copywriter.

Business Uses

Here is where Claude becomes your unfair advantage:

- **Sales pages:** Describe your product and audience, and Claude writes a complete sales page with headlines, benefits, objection handling, and calls to action.
- **Email sequences:** Give Claude your product and customer journey, and it produces a full nurture sequence, welcome series, or launch email set.
- **Course outlines:** Share your topic and audience, and Claude creates a structured curriculum with modules, lessons, and learning objectives.
- **Competitor analysis:** Paste a competitor's website copy and Claude breaks down their positioning, strengths, weaknesses, and opportunities for you.
- **Content strategy:** Describe your niche, and Claude generates months of content ideas organized by platform and content type.

5 Copy-Paste Prompts for Business Owners

PROMPT 1 — CONTENT IDEAS

I sell [product/service] to [audience]. Write 10 short-form video ideas that would attract potential buyers. For each idea, include: a hook (first line that stops the scroll), the main point, and a call to action. Focus on ideas that position me as an authority and make viewers want to learn more about what I offer.

PROMPT 2 — COMPETITOR ANALYSIS

Analyze this competitor's website: [paste URL or copy]. What are they doing well in terms of messaging, positioning, and offer structure? What gaps or weaknesses do you see? How could I differentiate my offer from theirs? Give me 5 specific ways to position myself as the better choice for [my target audience].

PROMPT 3 — PRODUCT OUTLINE

I want to create a digital product about [topic] for [audience]. Help me outline a comprehensive guide with 10 chapters. For each chapter, include: the chapter title, 3-5 key points to cover, and one actionable exercise or template the reader can use immediately. The goal is a product I can sell for \$27-47.

PROMPT 4 — EMAIL WELCOME SEQUENCE

Write a 5-email welcome sequence for new subscribers who signed up for my free [lead magnet type] about [topic]. My paid product is [product]. Each email should: build trust, deliver value, and naturally lead toward my paid offer. Include subject lines, preview text, and full email body. Tone: conversational, knowledgeable, not pushy.

PROMPT 5 — CONTENT PERFORMANCE ANALYSIS

I posted this content and it performed well: [paste your content]. Analyze why it worked. Break down: the hook, the structure, the emotional triggers, and the call to action. Then give me 5 variations I could create using the same formula but with different topics relevant to my niche of [your niche].

Claude Code — Your AI Developer

What It Is

Claude Code is a command-line AI tool that writes actual code based on plain English instructions. Instead of learning programming languages, you describe what you want, and Claude Code builds it. It runs in your computer's terminal and can create complete, functional projects from scratch.

This is not a toy or a prototype tool. I use Claude Code to build real websites, landing pages, and tools for clients at Seedscale Agency. The code it produces is production-quality.

What You Can Build

- **Landing pages:** Describe your offer, your brand colors, and the layout you want. Claude Code builds a complete, responsive landing page you can deploy.
- **Lead magnets:** Interactive calculators, assessment tools, resource libraries. Things that would cost \$2,000-5,000 from a freelance developer.
- **Email templates:** Custom HTML email designs that look professional in every inbox.
- **Simple web apps:** Quiz funnels, booking pages, content libraries, client portals.
- **Data analysis scripts:** Tools that process spreadsheets, generate reports, or analyze your business data.
- **Automation scripts:** Programs that handle repetitive tasks like file organization, data formatting, or content scheduling prep.

Getting Started

The setup takes about five minutes:

1. **Install Node.js** — Go to nodejs.org and download the installer for your computer. Run it. That is it.
2. **Open your terminal** — On Mac, search for "Terminal" in Spotlight. On Windows, search for "Command Prompt" or "PowerShell."
3. **Install Claude Code** — Type this command and press Enter: `npm install -g @anthropic-ai/claude-code`
4. **Start it** — Type `claude` and press Enter. You are now talking to an AI developer.

From here, you just describe what you want in plain English. "Build me a landing page for a fitness coaching business with a hero section, testimonials, and an email signup form. Use blue and white colors." Claude Code writes all the code, creates the files, and you can open the result in your browser.

Limitations

Claude Code is powerful, but it has boundaries. Complex applications that need user accounts, payment processing, or databases will eventually require a real developer. Think of Claude Code as the tool that handles 80% of what most small businesses need, and saves you from hiring a developer for every small project. For the other 20%, you will know when it is time to bring in human expertise.

Claude CoWork — Your AI Team

What It Is

Claude CoWork is a multi-agent capability built into the Claude desktop application. Instead of working with one AI assistant, you can have multiple AI agents working on different parts of a project simultaneously. Think of it as hiring a small team that works in parallel, each focused on their specific task.

How It Works

You assign different tasks to different agents, and they work at the same time. While one agent is writing your sales page, another is researching competitors, and a third is drafting your email sequence. You review each agent's work individually and combine the results into a cohesive final product.

Business Use Cases

- **Product launch prep:** One agent writes the sales page, one creates the email sequence, one drafts social media announcements, and one builds a FAQ document. What would take you a full week happens in an afternoon.
- **Content production:** One agent outlines blog posts, another writes social captions, a third creates email newsletter content, and a fourth generates video scripts. A full week of content created in two hours.
- **Market research:** One agent analyzes competitor pricing, another reviews their messaging, a third identifies market gaps, and a fourth summarizes customer reviews. Complete market intelligence in one session.

Tips for Getting the Most Out of CoWork

- **Give clear, specific tasks:** "Write a 500-word sales page for my \$47 meal planning guide targeting busy parents" works better than "help me with marketing."
- **Provide context upfront:** Share your brand voice, target audience, and any existing materials with each agent. The more context, the better the output.
- **Review individually:** Check each agent's work on its own merits before combining. This prevents compounding errors.
- **Use for parallel tasks:** CoWork shines when you have multiple independent tasks. If tasks depend on each other (write outline, then write chapter), do them sequentially with a single agent instead.

ChatGPT — The Pioneer

What It Is

ChatGPT, built by OpenAI, is the AI assistant that brought this technology into the mainstream. It offers a wide range of capabilities including conversational AI, image generation through DALL-E, voice interaction, web browsing, and the ability to create custom specialized assistants called GPTs.

Key Capabilities

- **Conversational interaction:** Natural, back-and-forth dialogue for brainstorming, writing, and problem-solving.
- **DALL-E image generation:** Create custom images from text descriptions. Product mockups, social media graphics, brand visuals, thumbnails, and more.
- **Custom GPTs:** Build specialized assistants for your specific use case. A GPT that knows your brand voice, your products, and your customer base.
- **Voice mode:** Talk to ChatGPT like a colleague. Useful for brainstorming while you walk, dictating content ideas, or working through strategy out loud.
- **Web browsing:** ChatGPT can search the internet for current information, which is useful for research and fact-checking.

Pricing

- **Free:** Access to the base model with usage limits. Fine for testing.
- **Plus (\$20/month):** Access to the most capable models, DALL-E, voice mode, and higher usage limits. The tier most business owners need.
- **Team (\$25/user/month):** For small teams. Shared workspace, admin controls, and higher limits.

When to Use ChatGPT vs. Claude

Both tools are excellent, but they have different strengths:

- **Need images?** Use ChatGPT. DALL-E is built in, and there is no equivalent in Claude.
- **Need voice interaction?** Use ChatGPT. The voice mode is genuinely useful for brainstorming and dictation.
- **Need long-form writing?** Use Claude. It produces more natural, nuanced, and human-sounding copy.
- **Need deep analysis?** Use Claude. It handles complex, multi-layered analysis better and provides more thoughtful reasoning.
- **Need to build something technical?** Use Claude Code. Neither ChatGPT nor Claude's chat interface can match what Claude Code does with actual code generation.

Choosing Your AI Stack

Head-to-Head Comparison

CAPABILITY	CLAUDE	CHATGPT	CLAUDE CODE
Best for	Writing, analysis, strategy	Images, voice, browsing	Building websites & tools
Writing quality	Excellent	Good	N/A
Image generation	No	Yes (DALL-E)	No
Code generation	Good (in chat)	Good (in chat)	Excellent (builds projects)
Voice mode	No	Yes	No
Web search	Yes	Yes	Yes (via tools)
Price	\$20/month	\$20/month	Included with Claude

The Recommended Starter Stack

YOUR \$40/MONTH AI TEAM

- **Claude Pro (\$20/month):** Your writer, strategist, and analyst. Use for all copy, email sequences, sales pages, course content, and business strategy. Claude Code is included with your Claude subscription.
- **ChatGPT Plus (\$20/month):** Your designer and researcher. Use for image generation, voice brainstorming, web research, and custom GPTs.

Total: \$40/month. This combination replaces what would cost \$2,000 to \$5,000 per month in freelancer fees for copywriting, graphic design, web development, and research assistance.

You do not need both on day one. If you are choosing just one tool to start, start with Claude Pro. The writing and analysis capabilities will have the most immediate impact on your business. Add ChatGPT Plus when you need image generation or voice mode.

PART 2

Building Your Lead Acquisition Engine

Social Media Is Your Engine, Not Your Product

The Fundamental Mistake

Most people treat social media as their business. They chase followers, obsess over likes, and measure success by vanity metrics. This is backwards. Social media is where people discover you. It is not where you make money. It is the engine that drives traffic to where you actually make money: your products, your email list, your offers.

The Real Funnel

Every successful digital business follows this path:

- 1. **Attention:** Someone sees your content on social media and stops scrolling.
- 2. **Interest:** They watch, read, or engage. They think, "This person knows what they are talking about."
- 3. **Trust:** They follow you, consume more content, and eventually join your email list.
- 4. **Purchase:** Through your emails and direct offers, they buy your product.

Notice that the purchase happens at the end, not on social media. Your job on social media is to move people from Attention to Interest to Trust. The selling happens through your email list, your website, and your direct offers.

Why Organic Content Beats Paid Ads for Beginners

Paid advertising works, but it requires budget, expertise, and an already-validated offer. If you spend \$1,000 on ads for a product nobody wants, you have lost \$1,000. Organic content is free. It lets you test messages, validate offers, and build an audience without financial risk. Once you have a product that sells consistently through organic channels, then you invest in paid ads to scale what is already working.

Platform Comparison

Platform	Best For	Growth Speed	Content Type	Ideal Audience
TikTok	Fastest growth	Very fast	Short video	18-35, broad
Instagram	Community building	Medium	Reels, Stories, carousels	25-45, visual niches
YouTube	Depth & search	Slow start, compounds	Long & short video	All ages, evergreen
LinkedIn	B2B, professional	Medium	Text posts, articles	Professionals, B2B
X / Twitter	Tech, real-time	Fast with engagement	Text, threads	Tech, media, business

THE ONE-PLATFORM RULE

Pick ONE platform to start. Master it. Build a system. Then expand. Trying to be everywhere at once is a guaranteed way to be mediocre everywhere. Choose the platform where your target audience already spends time, and where the content format plays to your strengths.

Content That Attracts Buyers

Viral Content vs. Profitable Content

A video with one million views that attracts no buyers is worth less than a video with 5,000 views that drives 50 email signups and 10 sales. Optimize for sales, not views. This does not mean your content should be boring. It means every piece of content should serve a strategic purpose in your funnel.

The 4 Content Pillars

- **Educational (40% of content):** Teach something genuinely useful. Show your expertise. Make people think, "If the free content is this good, what would the paid product be like?" This is the content that builds authority.
- **Behind-the-scenes (20%):** Show your process, your tools, your workspace, your failures. This builds relatability and trust. People buy from people they feel connected to.
- **Results and proof (20%):** Share outcomes, testimonials, case studies, before-and-after transformations. This is social proof that bridges the gap between interest and purchase.
- **Direct offer (20%):** Explicitly promote your product or service. Talk about what it includes, who it is for, and why it matters. Do not be afraid to sell. If your product genuinely helps people, promoting it is a service.

10 Proven Content Templates

1. **How I [achieved result]:** Share your personal process for a specific outcome. "How I built a \$5K/month side business using only AI tools."
2. **Comparison:** Compare tools, methods, or approaches. "[Tool A] vs [Tool B] for [specific use case]."
3. **Tutorial:** Step-by-step walkthrough of a process. "How to write a sales page in 15 minutes using Claude."
4. **Mistake:** Share common mistakes and how to avoid them. "The biggest mistake new course creators make."
5. **Myth:** Debunk a common belief in your niche. "You do NOT need 10K followers to sell a digital product."
6. **List:** Curated list of tools, resources, or tips. "7 AI tools every small business owner needs in 2025."
7. **Transformation:** Before-and-after story. "What my business looked like before AI vs. after."
8. **Prediction:** Share your take on where your industry is headed. "What AI will change about [niche] in the next 12 months."
9. **Reaction:** Respond to trending content or news in your niche. Adds timeliness and shows you are plugged in.
10. **Launch:** Announce and promote your product with energy and specifics.

PROMPT — CONTENT IDEA GENERATOR

I am a [your role/niche] creating content for [platform]. My target audience is [description]. My paid product is [product]. Generate 20 content ideas using these templates: How I, Comparison, Tutorial, Mistake, Myth, List, Transformation, and Prediction. For each idea, write a scroll-stopping hook (first sentence) and identify which content pillar it falls under (educational, behind-the-scenes, results, or direct offer).

Creating Content at Scale with AI

The 2.5-Hour Content Week

You do not need to spend 40 hours per week on content creation. With the right workflow and AI tools, you can produce a full week of high-quality content in about 2.5 hours. Here is the breakdown:

PHASE	TIME	WHAT YOU DO	AI TOOL
Ideation	10 min	Generate and select content ideas for the week	Claude
Scripting	20 min	Write scripts or outlines for each piece	Claude
Recording	60 min	Record video, take photos, or write drafts	You
Editing	30 min	Edit and polish content	CapCut / Canva
Publishing	10 min	Post and schedule across platforms	Buffer / Later

The Repurposing Multiplier

One strong piece of content should become five or more pieces. This is how creators who seem to be everywhere actually work. They create one core piece and repurpose it across formats:

- 1 video → Instagram carousel summarizing key points
- 1 video → Twitter/X thread with the main takeaways
- 1 video → Newsletter edition with added depth
- 1 video → Blog post (SEO value)
- 1 video → Quote graphics for Stories

PROMPT — CONTENT REPURPOSER

Here is a video script I created: [paste script]. Repurpose this into: (1) An Instagram carousel with 7 slides including a hook slide and a CTA slide. (2) A Twitter/X thread with 6-8 tweets. (3) A newsletter email with a personal intro, the key insights, and a call to action to [your CTA]. (4) A 300-word blog post optimized for the keyword [target keyword]. Keep my voice consistent across all formats: conversational, knowledgeable, and direct.

Minimum Posting Schedule

PLATFORM	MINIMUM	IDEAL	CONTENT TYPE
TikTok	3x/week	1x/day	Short video (30-90 sec)
Instagram	3x/week	5x/week + daily Stories	Reels, carousels, Stories
YouTube	1x/week	2x/week + Shorts	Long-form + Shorts
LinkedIn	3x/week	5x/week	Text posts, carousels
X / Twitter	1x/day	3-5x/day	Tweets, threads
Email	1x/week	2-3x/week	Newsletter, nurture emails

Building an Audience That Buys

Followers Are Vanity. Email Subscribers Are Business.

Let me be direct: 10,000 followers with no email list is worth less than 500 email subscribers. Social media platforms control your reach. They can change the algorithm overnight, and suddenly your posts reach 10% of the people they used to. Your email list is yours. No algorithm can take it away. No platform change can reduce your reach. Every subscriber is someone who has explicitly said, "I want to hear from you."

Growing From 0 to 1,000 Followers

The first 1,000 followers are the hardest. Here is the proven approach:

- **Post consistently:** Follow the minimum posting schedule above. The algorithm rewards consistency more than any other factor.
- **Comment on 10 niche accounts daily:** Leave thoughtful, substantive comments on accounts in your niche. Not "great post!" but genuine insights that make people want to check out your profile. This is the single most underrated growth strategy.
- **Collaborate:** Find creators at a similar level in adjacent niches and collaborate on content. Duets, stitches, joint live streams, guest posts. Every collaboration exposes you to a new audience.
- **Respond to every comment:** In your early days, respond to every single comment on your posts. This boosts engagement metrics and builds genuine connection with early supporters who become your biggest advocates.

Building Your Email List

Your email list is the most valuable asset in your business. Here is how to build it:

1. **Create a lead magnet:** Something free and genuinely valuable that your audience wants. A checklist, a template pack, a mini-guide, a resource list. Use Claude to write it and Claude Code to design it if needed.
2. **Mention it in your content:** End every piece of content with a mention of your free resource. "I put together a free [lead magnet] that covers [benefit]. Link in bio."
3. **Set up a landing page:** A simple page with a headline, a few bullet points about what they will get, and an email signup form. Claude Code can build this in minutes.
4. **Set up an email tool:** ConvertKit (free up to 10,000 subscribers), Mailchimp (free up to 500), or Beehiiv (free tier available). Connect it to your landing page.

The Only 3 Metrics That Matter Early On

TRACK THESE WEEKLY

- **Email subscribers per week:** This is your growth metric. Are you adding 10 per week? 50? 100? Set a target and track it.
- **Content saves and shares:** These indicate your content is valuable enough that people want to reference it later (save) or share it with others. More meaningful than likes.
- **DMs and replies:** Direct messages and replies indicate genuine interest and connection. These are your warmest leads. Respond to every one.

PART 3

Turning Followers Into Customers

Your Digital Storefront

You need a place to sell. Here are your options, ranked by complexity and cost:

Option 1: Your Own Website

Claude Code can build you a complete website from scratch. You describe what you want, and it creates a professional, responsive site. You will need a domain name (\$10-15/year from Namecheap or Google Domains) and hosting (\$5-15/month from providers like Netlify, Vercel, or a traditional host). The advantage: complete control, no platform fees, and it looks fully professional. The tradeoff: slightly more setup involved, but Claude Code handles the hard part.

Option 2: Gumroad

Free to start, and Gumroad takes a 10% fee on each sale. Best for simple digital products like guides, templates, and ebooks. Set up takes about 15 minutes. Upload your product, write a description, set a price, and share the link. No monthly fees, so there is zero risk to try. If your product does not sell, you have lost nothing.

Option 3: Stan Store

\$29 per month. Built specifically for creators with a social media audience. Think of it as a "link in bio" page that also sells products. Clean design, built-in checkout, digital product delivery, and audience tools. Best for creators who want a polished storefront that integrates with their social presence.

Option 4: Other Platforms

PLATFORM	MONTHLY COST	BEST FOR	KEY FEATURE
Teachable	\$39/mo	Online courses	Course player, quizzes, completion tracking
Kajabi	\$149/mo	All-in-one business	Courses, email, website, funnels in one
Podia	\$33/mo	Mixed products	Courses, downloads, community, coaching
Shopify	\$39/mo	Physical + digital	Full ecommerce with digital delivery

RECOMMENDATION

Start with Gumroad or Stan Store. Get your first product selling. Validate that people want what you are offering. Once you are consistently making \$1,000 or more per month, graduate to your own website or a more robust platform. Do not spend months building the perfect storefront before you have something to sell. Speed matters more than polish at this stage.

Products You Can Create with AI

Here are the most common digital products, ranked from lowest to highest effort. Start at the top and work your way down as you build confidence and audience.

PRODUCT TYPE	PRICE RANGE	EFFORT	BEST CREATED WITH
PDF guides / ebooks	\$10 - \$50	Low (1-3 days)	Claude (writing) + Canva (design)
Template packs	\$15 - \$50	Low (1-2 days)	Claude (content) + Canva or Claude Code
Prompt libraries	\$10 - \$30	Low (1-2 days)	Claude (writing and organizing)
Mini-courses	\$50 - \$200	Medium (1-2 weeks)	Claude (scripts) + screen recording
Full courses	\$200 - \$1,000	High (2-6 weeks)	Claude (curriculum) + video + platform
Memberships	\$20 - \$100/mo	Ongoing	Claude (content) + community platform

How to Validate Before You Build

Do not spend two weeks building a product nobody wants. Validate first:

1. **Post about the topic:** Create 3-5 pieces of content about the subject of your product. Do they get engagement? Do people ask follow-up questions? Do they save and share?
2. **Ask your audience directly:** Run a poll, ask in your Stories, or post a question. "I am thinking about creating a [product type] about [topic]. Would you want this?" If fewer than 20% of respondents say yes, reconsider the topic or angle.
3. **Pre-sell:** The ultimate validation. Offer the product at a discount before you create it. "I am building [product]. It will include [features]. Pre-order now for 40% off." If people pay before it exists, you have validation and motivation to build it.

The Launch Playbook

2 Weeks Before Launch

- **Announce the product is coming.** Tease it. Share the topic without revealing the full product. Build curiosity.
- **Share behind-the-scenes content.** Show yourself creating the product. The process is content. Screen recordings of you working, photos of outlines, snippets of the content.
- **Post high-value content related to the product topic.** Position yourself as the authority on this subject. Every piece of content should make people think, "I need to learn more from this person."
- **Build a waitlist.** Create a simple landing page where interested people can enter their email to be notified when the product launches. This is your warmest audience on launch day.

Launch Day

- **8:00 AM:** Send launch email to your full list. Subject line should create urgency and curiosity. Include a clear description, the price, and a direct link to purchase.
- **9:00 AM:** Post your main launch content on your primary platform. This should be your best-performing content format with your strongest hook.
- **Throughout the day:** Post Stories, updates, and behind-the-scenes content. Show early purchases coming in. Share your energy and excitement.
- **All day:** Respond to every comment, DM, and question. Launch day is not the day to step away from your phone.
- **2:00 PM:** Post a second piece of content addressing a common question or objection about the product.
- **6:00 PM:** Send a reminder email. "In case you missed this morning's email, [product name] is live."

After Launch (Days 2-7)

- **Days 2-3:** Share testimonials and early results. Ask first buyers for feedback and permission to share their words.
- **Days 4-5:** Address objections. "I have been getting questions about [common concern]. Here is the truth..." This content converts the undecided.
- **Day 6:** Create urgency. Announce a deadline for an introductory price, a bonus, or a limited offer.
- **Day 7:** Final push. Last email, last social post. "This is your final chance to get [product] at [price/bonus]. After today, [change]."

When to Raise Your Prices

- After you have received 10 or more positive reviews or testimonials
- After you have improved or expanded the product with additional content
- When demand consistently exceeds your expectations

Raising prices is not greedy. It reflects the value you deliver. A product that genuinely helps people is worth more as you prove that impact through results and testimonials.

PART 4

Your 30-Day Action Plan

Week-by-Week Roadmap

This is your complete action plan. Each day has a specific task, a time estimate, and the AI tool you will use. No guessing. No wondering what to do next. Just follow the plan.

Week 1: Foundation (Days 1-7)

- Day 1** Sign up for Claude Pro (\$20/mo). Spend 30 minutes exploring the interface. Ask it to help you brainstorm business ideas based on your expertise. *(30 min, Claude)*
- Day 2** Define your niche. Use Claude with this prompt: "I have experience in [area]. Help me identify 5 specific niches where I could create digital products. For each, estimate the audience size, willingness to pay, and competition level." Pick one. *(45 min, Claude)*
- Day 3** Research competitors. Find 5 accounts or businesses in your niche. Paste their content and website copy into Claude and ask for a competitive analysis. Identify gaps you can fill. *(60 min, Claude)*
- Day 4** Set up your content platform. Create or optimize your profile on your chosen platform. Write your bio using Claude. Use ChatGPT to generate a profile image if needed. *(45 min, Claude + ChatGPT)*
- Day 5** Generate 30 content ideas using Claude. Use the content idea generator prompt from Chapter 7. Organize them by content pillar and rank by priority. *(30 min, Claude)*
- Day 6** Script your first 3 pieces of content. Use Claude to write scripts or outlines for your top 3 content ideas. Review and personalize them with your voice and specific examples. *(60 min, Claude)*
- Day 7** Record or create your first piece of content. Do not aim for perfection. Aim for done. Post it. *(90 min, You + CapCut/Canva)*

Week 2: Content & List Building (Days 8-14)

- Day 8** Publish your first 3 pieces of content (if not already). Begin the daily habit of commenting on 10 accounts in your niche. *(45 min, You)*
- Day 9** Analyze your early content performance. Which got the most saves and shares? Ask Claude to analyze what worked and refine your approach. *(30 min, Claude)*
- Day 10** Create your lead magnet. Use Claude to write a valuable PDF guide, checklist, or template pack related to your niche. Focus on something your audience can use immediately. *(90 min, Claude)*
- Day 11** Set up your email tool. Sign up for ConvertKit (free), Beehiiv, or Mailchimp. Create your first email list and a simple welcome email. *(45 min, Claude for email copy)*
- Day 12** Build a landing page for your lead magnet. Use Claude Code to create a simple, clean page, or use your email tool's built-in landing page feature. *(60 min, Claude Code)*
- Day 13** Create 3 more pieces of content. At least one should mention your free lead magnet. Continue daily engagement on other accounts. *(60 min, Claude + You)*
- Day 14** Write a 5-email welcome sequence using Claude (use Prompt 4 from Chapter 1). Set it up in your email tool as an automation. *(60 min, Claude)*

Week 3: Product Creation (Days 15-21)

- Day 15** Decide on your first product. Based on audience response so far, choose a product type from Chapter 11. Use Claude to outline it. *(45 min, Claude)*
- Day 16** Create product content, Part 1. Use Claude to write the first half of your product. For a guide, this means chapters 1-5. For templates, create the first batch. *(2 hrs, Claude)*
- Day 17** Create product content, Part 2. Finish writing. Review everything. Add your personal examples, stories, and insights. *(2 hrs, Claude + You)*
- Day 18** Design and package your product. Use Canva for PDF design or Claude Code for a web-based product. Make it look professional. *(90 min, Canva or Claude Code)*
- Day 19** Set up your storefront. Create a Gumroad or Stan Store account. Upload your product, write the sales description (use Claude), set your price. *(60 min, Claude)*
- Day 20** Test the purchase flow. Buy your own product. Go through the entire experience. Fix anything that feels clunky or confusing. *(30 min, You)*
- Day 21** Write your sales page and launch emails. Use Claude to write a complete sales page and a 3-email launch sequence. *(90 min, Claude)*

Week 4: Launch (Days 22-30)

- Day 22-23** Pre-launch tease. Start hinting at your upcoming product in your content. Share behind-the-scenes of the creation process. Build anticipation. *(30 min/day, You)*
- Day 24-25** Behind-the-scenes content. Show the product, share snippets, let people see what is coming. Invite them to join your waitlist. *(30 min/day, You)*
- Day 26** Final prep. Review your launch emails, test all links, prepare your launch day content. Use Claude to review and strengthen your copy. *(60 min, Claude)*
- Day 27** LAUNCH DAY. Follow the Launch Day playbook from Chapter 12. Send emails, post content, engage with every response. *(Full day, All tools)*
- Day 28** Post-launch follow-up. Share early buyer reactions. Address questions. Send a follow-up email to non-buyers. *(60 min, Claude)*
- Day 29** Gather feedback. Reach out to buyers. Ask what they liked, what could be better. Use Claude to analyze the feedback for product improvements. *(45 min, Claude)*
- Day 30** Review and plan. Analyze your numbers: followers gained, email subscribers, products sold, revenue. Use Claude to help you set goals for month 2. *(60 min, Claude)*

Conclusion: The Only Advantage That Matters

I have built marketing systems at every scale imaginable. From scrappy startups to organizations raising millions. And I can tell you that the core principles never change: understand your audience, create genuine value, build trust systematically, and make it easy for people to buy.

What has changed is accessibility. The barriers that used to exist—technical skills, large teams, big budgets, years of experience—have been removed by AI. The systems in this guide are the same ones I use at Seedscale Agency for clients. The same strategic thinking. The same frameworks. The only difference is that now, you can implement them yourself with AI as your team.

But none of that matters if you do not start.

The real advantage is not which AI tool you use, which platform you choose, or how perfect your product is. The real advantage is starting before most people do. Right now, the majority of people are still watching from the sidelines, wondering if AI is "real" or "just a trend." By the time they decide to take action, you will already have an audience, a product, and a system that generates revenue.

Start ugly. Ship fast. Improve with feedback. That approach beats perfection every single time.

You have the guide. You have the tools. You have the 30-day plan. The only thing left is to open Claude and type your first prompt.

I will see you on the other side.

— Rebecca, Seedscale Agency

Resources & AI Prompt Library

Recommended Tools

AI Assistants

- Claude Pro — \$20/mo (writing, strategy, code)
- ChatGPT Plus — \$20/mo (images, voice, research)
- Claude Code — included with Claude (builds websites)

Content Creation

- Canva — \$13/mo (graphics, PDFs, presentations)
- CapCut — free (video editing)

Business Strategy Prompts

PROMPT — NICHE VALIDATION

I want to start a digital product business in the [niche] space. My target audience is [description]. Analyze this niche for me: (1) How large is the potential audience? (2) What are they already paying for? (3) Who are the top 5 competitors and what are they charging? (4) What gaps exist that I could fill? (5) Give me a specific product idea with a suggested price point and a one-sentence positioning statement.

PROMPT — REVENUE MODEL

I am building a digital business around [topic/expertise]. Help me design a product ladder with 4 tiers: a free lead magnet, a low-ticket product (\$10-50), a mid-ticket product (\$50-200), and a premium offer (\$200+). For each tier, describe: what the product is, what it includes, the price, and how it leads naturally to the next tier. Also estimate how many units I would need to sell at each level to reach \$5,000/month.

Content Creation Prompts

PROMPT — 30-DAY CONTENT CALENDAR

Create a 30-day content calendar for [platform] in the [niche] space. My paid product is [product]. For each day, provide: the content type (from the 4 pillars: educational, behind-the-scenes, results, direct offer), a specific topic, and a hook (the first line that stops the scroll). Ensure the mix is approximately 40% educational, 20% behind-the-scenes, 20% results, and 20% direct offer.

PROMPT — VIDEO SCRIPT WRITER

Write a 60-second video script for [platform] about [topic]. My audience is [description]. Structure: (1) Hook that stops the scroll in the first 2 seconds. (2) Problem or curiosity statement. (3) 3 key points delivered quickly. (4) Call to action directing them to [CTA]. Keep the language conversational and direct. No filler. Every sentence should earn the next second of watch time.

Sales Copy Prompts

PROMPT — SALES PAGE WRITER

Write a complete sales page for my digital product: [product name and description]. Price: [price]. Target audience: [description]. Include: (1) A headline that communicates the main benefit. (2) A subheadline that addresses a key pain point. (3) A "who this is for" section with 5 bullet points. (4) A "what you will learn/get" section with details on each module or section. (5) Three objection-handling sections. (6) A pricing section with a strong CTA. (7) An FAQ section with 5 questions. Tone: confident, helpful, direct. No hype or false urgency.

PROMPT — LAUNCH EMAIL SEQUENCE

Write a 3-email launch sequence for my product: [product name, price, description]. Email 1 (launch day): Build excitement, describe the product, include a special launch offer. Email 2 (day 3): Share a testimonial or result, address the #1 objection, remind them of the offer. Email 3 (day 7): Final call with urgency, summarize the value, last chance for the launch price. For each email include: subject line (and one alternative), preview text, and full body. Tone: enthusiastic but not pushy.

Research & Analysis Prompts

PROMPT — AUDIENCE RESEARCH

Help me deeply understand my target audience: [description]. Create a detailed customer avatar including: (1) Demographics: age, income, location, job. (2) Psychographics: values, beliefs, aspirations, fears. (3) Pain points: the 5 biggest frustrations related to [your topic]. (4) Desired outcomes: what does their ideal future look like? (5) Objections: why would they hesitate to buy a product like mine? (6) Where they spend time online: platforms, communities, influencers they follow. (7) Language they use: actual phrases and words they would use to describe their problems.

PROMPT – WEEKLY BUSINESS REVIEW

Here are my numbers from this week: [paste your metrics - followers, email subscribers, content performance, sales, revenue]. Analyze my performance: (1) What is working that I should double down on? (2) What is underperforming and why? (3) What should I prioritize next week? (4) Am I on track for my goal of [your goal]? If not, what specific adjustments would get me there? (5) Give me 3 action items for next week, ranked by expected impact.
