

SEEDSCALE · THE PROMPT PACK

Replace your marketing team.

30 plug-and-play prompts for ChatGPT and Claude —
organized by the exact role each one replaces.
Plus a Canva workflow that turns a post into a deck.

\$9

For founders, operators & lean teams.

By Rebecca · Founder, Seedscale Agency
seedscale.agency · Marketing leverage for lean teams

A marketing team is six roles. You can run all six.

You don't need to hire a department. You need the prompts a department would use.

Every marketing team is the same six jobs: someone sets strategy, someone writes, someone runs email, someone runs social, someone makes it look good, and someone reads the numbers. That's the team. Not the org chart — the work.

This pack hands you all six. Thirty prompts, grouped by the role each one replaces, tuned for ChatGPT and Claude. Set it up once, and you stop being a one-person team that does everything badly and start being one operator who ships like six people.

The through-line

Six roles. One operator. Nine dollars. The skill was never the tools — it's knowing exactly what to ask each role to do.

The team you're replacing.

Here's what these six roles cost on the open market. Then here's what this pack costs.

The Strategist

Positioning, campaign briefs, the 90-day plan

\$4–8K/mo

The Copywriter

Posts, landing pages, hooks, proof points

\$3–5K/mo

The Email Marketer

Welcome, launch, win-back, the newsletter

\$2–4K/mo

The Social Manager

Calendar, threads, repurposing, captions

\$2–4K/mo

The Designer

Decks, carousels, one-pagers, visual briefs

\$2–4K/mo

The Analyst

VoC research, A/B tests, the weekly review

\$2–4K/mo

A REAL MARKETING TEAM

≈ \$15–30K / month

This pack: \$9. Once.

Build your Brand Kit once. Then stop fighting for output.

Five minutes now, and every prompt that says “use my Brand Kit” comes back already sounding and looking like you — not like everyone else's ChatGPT.

1 · Voice

Five testable rules plus 3 do's and 3 don'ts. Build it in 30 seconds with Prompt 09, The Voice Match.

2 · Colors & fonts

Your brand hex codes, fonts, and logo do/don'ts — so every design prompt styles itself on-brand.

3 · Swipe file

Paste 3–5 of your best-performing emails, posts, and pages, each with one line on why it won. The prompts model these.

PASTE AT THE TOP OF A CUSTOM GPT (CHATGPT) OR A PROJECT (CLAUDE):

We are [1 line]. ICP: [who + what triggers the buy]. Offer: [what, price].

Voice — 5 rules: [...]; always: [...]; never: [...].

Colors: [#073B3A, #FACC15]. Fonts: [...].

Swipe file: [paste best email] — won by [...]; [paste best post] — won by [...].

Two rules for every prompt: swap the [brackets], and always take the second draft.

Each prompt's tag tells you where it runs best — ChatGPT (fast, punchy), Claude (long context, nuance), or Either.

The Strategist

 REPLACES: a fractional CMO / strategist, ~\$4–8K/mo

PROMPT 01 The ICP Sharpener

Either

When: Positioning feels generic.

“Here’s how I describe my customer today: [paste]. Tear it apart — where is it generic, and what’s the cost of that vagueness? Rewrite it 3 ways, each tighter and named to one real person: their role, the trigger that makes them buy now, and the words they’d actually use. No personas that could be anyone.”

PROMPT 02 The Angle Finder

Claude

When: You sound like everyone else.

“Here’s my offer: [paste]. Give me 5 positioning angles competitors aren’t already using. For each: the wedge in one sentence, who it wins, who it deliberately loses, and the one line of copy that lands it. Skip any angle a rival could claim word-for-word. Rank by hardest-to-copy.”

PROMPT 03 The Campaign Brief

Either

When: Starting any campaign.

“Build a one-page campaign brief for [goal]. Audience [ICP], offer [X], channels [list]. Output: objective (with a number), big idea in one sentence, 3 proof points a skeptic would believe, primary CTA, and the single metric that proves it worked. Ask me up to 3 questions first if anything’s missing.”

PROMPT 04 The Offer Stress-Test

Claude

When: Before launching an offer.

“Here’s my offer and price: [paste]. Play the skeptical buyer in my market. List the 7 objections that actually kill the sale — ranked by how often they’d come up — and the single strongest counter to each, in plain language a rep could say out loud. No strawmen I can easily beat.”

PROMPT 05 The Quarter-on-a-Page

Either

When: Planning the next 90 days.

“Act as my fractional CMO. Given [goal] and [constraints], draft a 90-day plan: 3 priorities (each with why-now), monthly themes, the first action for each month, and the one metric that proves it’s working. Respect my team size — no plan I can’t run. Ask up to 3 questions first if you need them.”

The Copywriter

 REPLACES: a contract copywriter, ~\$3–5K/mo

PROMPT 06 The Hook Generator

Either

When: Before any post or article.

“Using my brand voice, give me 12 hooks on [topic] for [ICP]. Mix contrarian, stat, story, question — label each by type. Each names a concrete tension, number, or moment; no vague promises, no clickbait; under 12 words. Echo the rhythm of my best hooks: [paste 2–3]. Flag your top 3 and why.”

PROMPT 07 Blog-Post-in-15

Either

When: You owe content and have no time.

“In my brand voice, write a 700-word blog draft on [topic] for [ICP] using this hook: [paste]. One argument, not a listicle; short sentences; open mid-thought; a real example or number in every section; end on a takeaway they can act on Monday. Match the build of my best post: [paste].”

PROMPT 08 The Landing-Page Hero

Claude

When: Drafting a sales or product page.

“In my brand voice, write 5 hero blocks (headline + subhead + CTA) for [offer], [ICP]. Vary claim / story / problem / comparison / contrarian. Lead with a specific outcome or number — clarity over cleverness, no vague benefits. Distinct CTAs. Echo what worked on my best page: [paste].”

PROMPT 09 The Voice Match

Claude

When: Build your Brand Kit voice.

“Here are 5+ things I've written — ideally my top performers: [paste]. Distill my voice into 5 specific, testable rules plus 3 do's and 3 don'ts, quoting me as proof. This becomes my Brand Kit voice. Then rewrite this draft to match it, keeping my meaning: [paste].”

PROMPT 10 The Proof-Point Rewriter

Either

When: Your claims feel flat.

“In my brand voice, rewrite each claim as a concrete proof point a skeptic would believe — add a number, mechanism, or example. Never invent figures: leave a [fill: ____] where real data's needed. Match the evidence style of my best page: [paste]. Flag any claim too vague to prove. Claims: [paste].”

The Email Marketer

REPLACES: an email / lifecycle marketer, ~\$2–4K/mo

PROMPT 11 The Subject-Line Test

Either

When: Every email you send.

“Using my brand voice, write 10 subject lines that beat mine: [paste]. For [ICP]; mix curiosity, specificity, benefit; under 50 chars; no emojis; use my product's real mechanism. Model my highest-open subjects: [paste 2–3]. Flag the 3 strongest with predicted lift, and the weakest with why.”

PROMPT 12 The Welcome Sequence

Either

When: A new subscriber path.

“In my brand voice, build a 4-email welcome sequence for [ICP] who downloaded [thing]: deliver, build trust, soft-pitch [offer]. Under 180 words each; per email give subject, send-delay, one CTA. Match the tone of my best emails: [paste]. No fluff intros; name their real workflow pain.”

PROMPT 13 The Launch Skeleton

Claude

When: Any product or offer launch.

“In my brand voice, build a 5-email launch sequence for [product], [ICP]: announce, story, objection, proof, last call. Under 200 words each; subject + send-day per email; the objection email names the real reason they say no; proof uses a concrete result. Mirror my best launch email: [paste].”

PROMPT 14 The Newsletter Spine

Either

When: Weekly or monthly send.

“In my brand voice, draft a 250-word newsletter on [idea] for [ICP]. Open on a specific moment, not a meta-comment; one idea; mildly contrarian; end with one action they can take today; add a 5-word subject. Match the feel of my most-opened issue: [paste].”

PROMPT 15 The Win-Back

Either

When: Re-engaging cold subscribers.

“In my brand voice, write a 3-email win-back for [ICP] cold 90 days. Honest, low-pressure, no guilt-trips; subject + send-gap per email. E1 names the silence; E2 gives one real reason to stay; E3 is the clean goodbye + one click to stay. Match a win-back that worked for me: [paste].”

The Social Manager

REPLACES: a social media manager, ~\$2–4K/mo

PROMPT 16 The Repurpose Engine

Either

When: After publishing anything.

“In my brand voice, repurpose this [blog/talk]: [paste] into 3 LinkedIn posts, 1 X thread (8 tweets), 3 Reels hooks, 1 newsletter intro. Pull the strongest ideas verbatim — don't paraphrase or invent stats; each leads with a different angle. Model my top posts: [paste 1–2].”

PROMPT 17 The Content Calendar

Either

When: Planning the month.

“Build a 4-week calendar for [ICP]. Inputs: 2 LinkedIn/wk, 1 newsletter, 3 Reels; pillars [3 pillars]. Output a table: date, channel, pillar, hook — each hook a specific, postable line in my brand voice, no topic placeholders. Favor the formats that worked in my best posts: [paste].”

PROMPT 18 The Thread Builder

Claude

When: A long-form idea worth a thread.

“In my brand voice, turn this idea into a 9-tweet X thread: [paste]. Tweet 1 is a scroll-stopping hook with a specific claim, not a question; one idea per tweet, each under 280 chars; soft CTA; no filler. Match the cadence of my best thread: [paste].”

PROMPT 19 Comment-to-Content

Either

When: Mining your own replies and DMs.

“From these comments and DMs: [paste], find the 5 questions worth a full post. For each: quote the source, a hook in my brand voice, the angle, and why it lands with [ICP]. Skip generic ones. Lean into themes my best content already proves resonate.”

PROMPT 20 The Caption Variants

ChatGPT

When: Posting a graphic or Reel.

“In my brand voice, write 5 caption variants for a post on [topic] — no hype, no emoji. Vary the opener (question, stat, blunt claim, story, contrarian); first line must hook standalone; no two alike. Match what worked in my best captions: [paste 1–2].”

The Designer

 REPLACES: a designer, ~\$2–4K/mo · Canva workflow next page

PROMPT 21 The Slide Outline

Either

When: Before you build any deck.

“Outline a [N]-slide deck on [topic] for [audience]. One idea per slide that builds an argument: title + 1-line takeaway (a claim, not a topic) + a visual suggestion using my brand colors [hex codes] and fonts. No filler slides; skimmable; each takeaway something a skeptic could dispute.”

PROMPT 22 The Carousel Builder

Claude

When: A LinkedIn or Instagram carousel.

“Turn this post into an 8-slide carousel: [paste], styled in my brand colors [hex codes] and fonts. Slide 1 hook, slides 2–7 one distinct point each (no overlap), slide 8 CTA. Title (max 6 words) + body line (max 20 words) per slide, in my voice. Match the look of my best carousel: [paste].”

PROMPT 23 The Visual Brief

Either

When: You need a graphic, can't design.

“Write a build-ready brief for a graphic on [topic]: aspect ratio, top-to-bottom layout zones, visual hierarchy (what the eye hits 1st/2nd/3rd), one focal point, my brand colors [hex codes] and fonts and where each goes, plus 3 headline options in my voice. Follow accessibility contrast best practices.”

PROMPT 24 The Infographic Spine

ChatGPT

When: Turning data into a visual.

“From my data: [paste], structure an infographic in my brand colors [hex codes]: one takeaway, 3–4 supporting stats (use only my numbers — invent nothing), a logical top-to-bottom flow. Label each block, suggest a chart type per stat, and keep one clear focal hierarchy.”

PROMPT 25 The One-Pager

Either

When: A sell sheet or leave-behind.

“Draft copy and section layout for a one-page sell sheet for [offer], [ICP], in my brand voice and colors [hex codes]: headline, problem, solution, 3 benefits (each tied to a concrete outcome, not adjectives), proof (specific — metric, logo, or quote), CTA. Tight, scannable, clear hierarchy.”

Turn any post into a branded slide deck.

This is the one I use for my own slides. Connect Canva to your AI assistant, hand it your content, and get back a deck already on-brand. Four steps.

- 1 Connect Canva.**
In ChatGPT, add the Canva app from the connectors / GPTs menu. In Claude, enable the Canva connector under settings. One-time login.
- 2 Set your Brand Kit first.**
In Canva, load your logo, fonts, and brand colors into a Brand Kit. The AI applies it on generate, so the deck comes out on-brand, not generic.
- 3 Prompt the deck from your content.**
Paste the post or outline and ask Canva to build the slides (prompt below). It generates a real, editable Canva design — not a flat image.
- 4 Refine in Canva, export.**
Open it in Canva, nudge spacing and swap a photo or two, then export to PDF or PNG. Minutes, not an afternoon.

THE PROMPT

“Using my Brand Kit, build a 10-slide deck from this post: [paste]. One idea per slide, short headline + one supporting line each. Keep my colors and fonts.”

The Analyst

REPLACES: a marketing analyst, ~\$2–4K/mo

PROMPT 26 The VoC Miner

Claude

When: You have transcripts or reviews.

“Here are [X] customer transcripts: [paste]. Extract the 5 most common pains in customers' exact words — rank by frequency, 2 verbatim quotes each (with who said it). Then flag unmet jobs nobody's solving. Use only what's in the transcripts; if a pain appears fewer than twice, say so instead of padding to 5.”

PROMPT 27 The A/B Idea Generator

Either

When: Deciding what to test.

“Here's my [page/email]: [paste]. Propose 5 A/B tests as a table: hypothesis, exact change (old to new copy/element), primary metric, and why it'll move. Rank by likely impact. No vague ‘test the CTA’ — name the specific words/elements. Skip anything you can't tie to what's actually on the page.”

PROMPT 28 The Funnel Diagnoser

Claude

When: Numbers are soft, not sure why.

“Here are my funnel numbers: [paste]. Name the single weakest step (cite the conversion rate vs. a normal B2B SaaS benchmark), explain the most likely leak cause, and give 3 fixes ordered least to most effort with the metric each should move. If a step's data is missing, say so — don't guess the weak point.”

PROMPT 29 The Weekly Review

Either

When: Every Friday.

“Here's what I shipped this week: [list]. Goal: [outcome]. Sort each item into busywork / leverage / unclear — judged only against the goal, not vibes. Name the single highest-leverage thing I underspent on, and the one thing to cut next week. Be blunt; if an item didn't move the goal, say it plainly.”

PROMPT 30 The Report Summarizer

ChatGPT

When: Pulling a stakeholder update.

“Here's my raw analytics: [paste]. Write exactly 6 lines for a busy stakeholder: (1-2) what moved, with the numbers; (3-4) what didn't, with numbers; (5) the most likely why; (6) the one thing we're changing. Use only figures in the data — no invented metrics. Plain, no hype.”

Seven days to a working habit.

30–45 min/day. One role per day. By Sunday you'll have run the whole team once.

- DAY 1** **Brand Kit + Strategist.**
Build your Brand Kit (page 4) — voice, colors, swipe file. Then run the ICP Sharpener and Quarter-on-a-Page. Save it all; it feeds the rest of the week.
- DAY 2** **Copywriter.**
Use the Hook Generator, then Blog-Post-in-15 on your #1 customer pain. Edit it. Ship it. Real post, real audience.
- DAY 3** **Email Marketer.**
Run the Subject-Line Test and Newsletter Spine. Send one real email to your list. Note the open rate vs. your average.
- DAY 4** **Social Manager.**
Take Day 2's post and run the Repurpose Engine + Content Calendar. Schedule the next 5 days of social from that one asset.
- DAY 5** **Designer + Canva.**
Run the Slide Outline, then the Canva connector workflow (page 10). Build one branded deck or carousel start to finish.
- DAY 6** **Analyst.**
Run the VoC Miner on any transcripts or reviews, then the Weekly Review on everything you shipped. Be honest.
- DAY 7** **Decide.**
Pick the 2 prompts that earned their keep. Those become your weekly default. Compounding starts with keeping, not collecting.

Three metrics. That's it.

If you can't move these, you don't have an AI workflow yet — you have a habit of opening a chat window.

Time-to-first-draft

From “I need to make X” to “I have a draft I can edit.” Goal: under 5 minutes.

If setup takes more than 10 minutes, your context block isn't good enough yet. Fix it once, save it forever.

Output per week

Posts shipped. Emails sent. Decks built. Count whatever your business actually needs more of.

Don't measure “time saved” — it's invisible. Measure work shipped. Work shipped is what pays.

Quality drift

Compare an AI-assisted piece to one you wrote start-to-finish 3 months ago. Honest read.

If quality dropped, your editing standard slipped — not the model. Tighten the second-draft pass.

Five traps that eat your time.

01. Auto-publishing slop.

“Good enough” is not a brand. Every AI-assisted piece still needs a human edit pass. Skip it and your audience can tell — so can the algorithms now.

02. Replacing strategy with prompts.

AI is faster than a junior hire, not smarter than you. If you don't know what your customer needs, no prompt fixes that. Run the Strategist prompts first.

03. Tool-hopping every week.

There's a new wrapper app every Tuesday. The leverage is in the workflow, not the tool. Pick ChatGPT or Claude and stay 90 days before you switch.

04. Re-explaining yourself every time.

If you re-paste your ICP and voice on every prompt, you're paying the setup tax forever. That's what the Brand Kit on page 4 is for. Build it once, use it.

05. Skipping the second draft.

The first output is the floor, not the ceiling. The editing is where your taste shows up. Five extra minutes is what separates your output from slop.

Pick your next rung.

If this pack pulled its weight, here's how to keep going. Free → low-ticket → operating system → 1:1.
